**Checklist**

Please indicate that each of the following All Appropriate Inquiries documentation requirements were met for the Phase I assessment conducted at the above listed property:

- An *opinion* as to whether the inquiry has identified conditions indicative of releases or threatened releases of hazardous substances, and as applicable, pollutants and contaminants, petroleum or petroleum products, or controlled substances, on, at, in, or to the subject property.
- An identification of "*significant*" *data gaps* (as defined in §312.10 of AAI final rule and §12.7 of ASTM E1527-05 and E1527-13), if any, in the information collected for the inquiry, as well as comments regarding the significance of these data gaps. Significant data gaps including missing and unattainable information that affects the ability of the environmental professional to identify conditions indicative of releases or threatened releases of hazardous substances, and as applicable, pollutants and contaminants, petroleum or petroleum products, or controlled substances, on, at, in, or to the subject property.
- Qualifications and signature* of the environmental professional(s). The environmental professional must place the following statements in the document and sign the document:
  - "[I, We] declare that, to the best of [my, our] professional knowledge and belief, [I, we] meet the definition of Environmental Professional as defined in §312.10 of this part."
  - "[I, We] have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. [I, We] have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

Note: Please use either "I" or "We."
- In compliance with §312.31(b) of the AAI final rule and §12.6.1 of ASTM E1527-05 and E1527-13, the environmental professional must include in the final report an *opinion regarding additional appropriate investigation*, if the environmental professional has such an opinion.

## Sign-off Sheet and Signatures of Environmental Professionals

This document entitled 50 and 57 Meadowview Center, Kankakee, Illinois Phase I Environmental Site Assessment was prepared by Stantec Consulting Services Inc. (Stantec) for the account of the City of Kankakee. The material in it reflects Stantec's best judgment in light of the information available to it at the time of preparation. Any use which a third party makes of this report, or any reliance on or decisions made based on it, are the responsibilities of such third parties. Stantec accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

All information, conclusions, and recommendations provided by Stantec in this document regarding the Phase I ESA have been prepared under the supervision of and reviewed by the professionals whose signatures appear below.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property. I have developed and performed all the appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

## PHASE I ENVIRONMENTAL SITE ASSESSMENT

SUMMARY  
December 14, 2015

### 1.0 SUMMARY

Stantec Consulting Services Inc. (Stantec) has completed a Phase I Environmental Site Assessment (ESA) report of the property located at 50 and 57 Meadowview Center, Kankakee, Illinois (the "Property"), on behalf of the City of Kankakee (the "Client"). The work was performed according to the Masters Services Agreement dated August 15, 2014. City of Kankakee (the "User") has been designated as the User of this report.

The Phase I ESA was conducted in conformance with the requirements of American Society for Testing and Materials (ASTM) Designation E 1527-13, except as may have been modified by the scope of work, and terms and conditions, requested by the Client. Any exceptions to, or deletions from, the ASTM practice are described in Section 2.3.

The Property consists of approximately 3.37 acres of land developed with a three-story, approximately 45,000 square foot building, paved parking areas and an access driveway for the surrounding shopping center. The Property was most recently occupied TTC Inc., as an office space for its human resource, outsourcing and training facility. Surrounding properties are a mix of commercial and residential properties. A Property location map is illustrated on Figure 1. A Property map illustrating the main features of the Property is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A

We have performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E1527-13 of the 50 and 57 Meadowview Center, Kankakee, Illinois, or the Property. Any exceptions to, or deletions from, this practice are described in the Data Gaps section of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the property except for the following:

- Concord Custom Cleaners, a drycleaner, was formerly located in the northern part of the Property. The business is believed to have operated as a drycleaner using chlorinated solvents from the 1970s to approximately 2005. Contamination was discovered in soil and groundwater, and remediation, including excavation of contaminated soil, was conducted. The Property received a No Further Remediation (NFR) letter from the Illinois EPA in 2012; however analysis of the soil and groundwater data indicated the potential for soil, soil vapor and groundwater at the Property to continue to be impacted at concentrations exceeding current applicable Illinois EPA cleanup standards.
- A site located 100 feet east and up gradient up the Property has been utilized as a gas station since the early 1970s.

### PHASE I ENVIRONMENTAL SITE ASSESSMENT

#### INTRODUCTION

December 14, 2015

## 2.0 INTRODUCTION

The objective of this Phase I ESA was to perform appropriate inquiry into the past ownership and uses of the Property consistent with good commercial or customary practice as outlined by the ASTM in "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", Designation E1527-13. The purpose of this Phase I ESA was to identify, to the extent feasible, adverse environmental conditions including recognized environmental conditions ("RECs") of the Property.

The ASTM E1527-13 standard indicates that the purpose of the Phase I ESA is to identify RECs, including historical recognized environmental conditions ("HRECs"), and controlled recognized environmental conditions ("CRECs") that may exist at a property. The term "recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property:

- (1) Due to any release to the environment;
- (2) Under conditions indicative of a release to the environment; or
- (3) Under conditions that pose a material threat of a future release to the environment.

ASTM defines a "HREC" as a REC that has occurred in connection with the property, but has been addressed to the satisfaction of the applicable regulatory authority and meets unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls). Before calling the past release a HREC, the environmental professional must determine whether the past release is a REC when the current Phase I ESA is conducted (for example, if there has been a change in the regulations). If the EP considers the past release to be a REC at the time the Phase I ESA is conducted, the condition shall be included in the conclusions section of the report as a REC.

ASTM defines a "CREC" as a REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), but with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

*De minimis* conditions are not RECs. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. As indicated, the term REC does not include *de minimis* conditions, which generally do not present a material risk to human health

and would not likely be subject to enforcement action if brought to the attention of governmental agencies.

This ESA was conducted in accordance with the Masters Services Agreement dated August 15, 2014. The scope of work conducted during this Phase I ESA consisted of a visual reconnaissance of the Property, interviews with key individuals, and review of reasonably ascertainable documents. The scope of work did not include an assessment for environmental regulatory compliance of any facility ever operated at the Property (past or present), or sampling and analyzing of environmental media. Stantec was not contracted to perform any independent evaluation of the purchase or lease price of the Property and its relationship to current fair market value. The conclusions presented in this ESA report are professional opinions based on data described herein. The opinions are subject to the limitations described in Section 2.3.

ASTM E1527-13 notes that the availability of record information varies from source to source. The User or Environmental Professional is not obligated to identify, obtain, or review every possible source that might exist with respect to a property. Instead, ASTM identifies record information that is reasonably ascertainable from standard sources. "Reasonably ascertainable" means:

- (1) Information that is publicly available;
- (2) Information that is obtainable from its source within reasonable time and cost constraints;  
and
- (3) Information that is practicably reviewable.

#### 2.1 PROPERTY DESCRIPTION

The Property consists of approximately 3.37 acres of land developed with a three-story approximately 45,000 square foot building, paved parking areas and an access driveway for the surrounding shopping center. The Property was most recently occupied TTC Inc., as an office space for its human resource, outsourcing and training facility. Surrounding properties are a mix of commercial and residential properties. A Property location map is illustrated on Figure 1. A Property map illustrating the main features of the Property is provided as Figure 2. Photographs taken during the site reconnaissance visit are provided in Appendix A

#### 2.2 SPECIAL TERMS, CONDITIONS, AND SIGNIFICANT ASSUMPTIONS

There were no special terms, conditions, or significant assumptions associated with this Phase I ESA.

### 2.3 EXCEPTIONS AND LIMITING CONDITIONS

This report documents work that was performed in accordance with generally accepted professional standards at the time and location in which the services were provided and given the schedule and budget constraints established by the client. No other representations, warranties, or guarantees are made concerning the accuracy or completeness of the data or conclusions contained within this report, including no assurance that this work has uncovered all potential and actual liabilities and conditions associated with the identified property.

This report provides an evaluation of selected environmental conditions associated with the identified portion of the property that was assessed at the time the work was conducted and is based on information obtained by and/or provided to Stantec at that time. There are no assurances regarding the accuracy and completeness of this information. All information received from the client or third parties in the preparation of this report has been assumed by Stantec to be correct. Stantec assumes no responsibility for any deficiency or inaccuracy in information received from others.

If a service is not expressly indicated, do not assume it has been provided. If a matter is not addressed, do not assume that any determination has been made by Stantec in regards to it.

Conclusions made within this report consist of Stantec's professional opinion as of the time of the writing of this report, and are based solely on the scope of work described in the report, the limited data available, and the results of the work. They are not a certification of the property's environmental condition.

The client did not provide or contract Stantec to provide recorded title records or search results for environmental liens or activity and use limitations encumbering the property or in connection with the property. Stantec did not obtain historical records that document the property history in 5-year intervals and this resulted in data gaps. These data failures represent data gaps; however, these data gaps are not considered significant. Based on the information obtained during the course of this ESA and general knowledge of development at and near the Property, the absence of this information did not affect the ability of the Environmental Professionals to identify RECs, HRECs, CRECs, or de minimis conditions.

This report relates solely to the specific project for which Stantec was retained and the stated purpose for which this report was prepared and shall not be used or relied upon by the client identified herein for any variation or extension of this project, any other project, or any other purpose.

This report has been prepared for the exclusive use of the client identified herein and any use of or reliance on this report by any third party is prohibited, except as may be consented to in writing by Stantec or as required by law. The provision of any such consent is at Stantec's sole and unfettered discretion and will only be authorized pursuant to the conditions of Stantec's

standard form reliance letter. Stantec assumes no responsibility for losses, damages, liabilities, or claims, howsoever arising, from third party use of this report.

Project Specific limiting conditions are provided in Section 2.2.

The locations of any utilities, buildings and structures, and property boundaries illustrated in or described within this report, if any, including pole lines, conduits, water mains, sewers and other surface or sub-surface utilities and structures are not guaranteed. Before starting work, the exact location of all such utilities and structures must be confirmed by the client and Stantec assumes no liability resulting from damage to such utilities and structures.

The conclusions are based on the conditions encountered at the Property by Stantec at the time the work was conducted. Accordingly, additional studies and actions may be required. As the purpose of this report is to identify selected Property conditions which may pose an environmental risk; the identification of non-environmental risks to structures or people on the Property is beyond the scope of this assessment. The findings, observations, and conclusions expressed by Stantec in this report are not an opinion concerning the compliance of any past or present owner or operator of the Property which is the subject of this report with any Federal, state, provincial or local law or regulation.

This report presents professional opinions and findings of a scientific and technical nature. It does not and shall not be construed to offer a legal opinion or representations as to the requirements of, nor compliance with, environmental laws, rules, regulations or policies of Federal, state, provincial or local governmental agencies. Issues raised by the report should be reviewed by client legal counsel.

Stantec specifically disclaims any responsibility to update the conclusions in this report if new or different information later becomes available or if the conditions or activities on the property subsequently change.

#### **2.4 PERSONNEL QUALIFICATIONS**

This Phase I ESA was conducted by an individual that meets the ASTM definition of an Environmental Professional (EP). The credentials of the EP and other key Stantec personnel involved in conducting this Phase I ESA are provided in Appendix B.

USER-PROVIDED INFORMATION  
December 14, 2015

### 3.0 USER-PROVIDED INFORMATION

ASTM E1527-13 describes responsibilities of the User to complete certain tasks in connection with the performance of "All Appropriate Inquiries" into the Property. The ASTM standard requires that the EP request information from the User on the results of those tasks because that information can assist in the identification of RECs, CRECs, HRECs, or de minimis conditions in connection with the Property. Towards that end, Stantec requested that the User provide the following documents and information:

Description of Information	Provided (Yes / No)	Description and/or Key Findings
User Questionnaire	Yes	Mr. Clifford Cross completed the User Questionnaire and identified the former use of the Property by a drycleaner as a potential environmental concern.
Environmental Liens or Activity Use Limitations	No	None Provided
Previous Environmental Permits or Reports Provided by User	No	The User reportedly does not possess any of these documents.
Purpose of the Phase I ESA	Yes	To evaluate the Property as part of the City of Kankakee's US EPA Brownfields Assessment Grant

Stantec forwarded the ASTM recommended User Questionnaire to Mr. Clifford Cross of the City of Kankakee. The completed User Questionnaire was returned to us by Mr. Cross and is included in Appendix C.

RECORDS REVIEW  
December 14, 2015

#### 4.0 RECORDS REVIEW

The objective of consulting historical sources of information is to develop the history of the Property and surrounding area, in order to evaluate if past uses may have resulted in RECs. Physical setting records are evaluated to determine if the physical setting may have contributed to adverse environmental conditions in connection with the Property. During the review of historical records, Stantec attempted to identify uses of the Property from the present to the first developed use of the Property. Stantec's research included the reasonably ascertainable and useful records described in this section.

#### 4.1 PHYSICAL SETTING

A summary of the physical setting of the Property is provided in the table below with additional details in the following subsections

Topography:	The Property is generally flat with less than 5 feet of topographic relief on the Property. The Property is located at approximately 640 feet above mean sea level.
Soil/Bedrock Data:	The Property is located in the area covered by unconsolidated glacial deposits up to 200 feet thick in some areas. Melting ice from the Lake Michigan lobe during Wisconsinan glaciation is thought to be responsible for depositing the glacial till, sand and gravel in the area.
Estimated Depth to Groundwater/ Estimated Direction of Gradient:	Based on the results of nearby groundwater investigations at the former Concord Custom Cleaners, groundwater flow is anticipated to be to the west with groundwater present at a depth of less than 15 feet below grade (fbg).
<i>Note: Site-specific groundwater direction and depth can only be determined by conducting site-specific testing, which Stantec has not conducted.</i>	

##### 4.1.1 Property Topography and Surface Water Flow

The Property is generally flat with less than 5 feet of topographic relief on the Property. The Property is located at approximately 640 feet above mean sea level. The general topography in the area slopes to the west towards the Kankakee River.

##### 4.1.2 Regional and Property Geology

The Illinois State Geological Survey Circular (1984) entitled Potential for Contamination of Shallow Aquifers in Illinois, commonly known as the Berg Circular, was referenced to accurately locate

### PHASE I ENVIRONMENTAL SITE ASSESSMENT

RECORDS REVIEW  
December 14, 2015

the Property in relation to subsurface soil formations that are believed to exist locally throughout the area. The Property appears to be a "B1" designation meaning it consists of sand less than 20 feet thick underlain by relatively impermeable clay fill.

The Property is located in the area covered by unconsolidated glacial deposits up to 200 feet thick in some areas. Melting ice from the Lake Michigan lobe during the Wisconsin glacialiation is thought to be responsible for depositing unconsolidated glacial fill and gravel in the area. The topography for the area is also a result of glacialiation, and is marked by many undulating hills called moraines formed as a result of drift accumulation at the borders of the glacier. Underlying the fill is a series of fractured dolomitic units of Silurian time which provide adequate groundwater supplies for industrial and municipal wells (Zeizel et. al, 1962).

#### 4.1.3 Regional and Property Hydrogeology

The shallow water table is often a subdued expression of surface topography. Shallow groundwater generally flows from areas of groundwater recharge, such as hills and broad uplands, to areas of groundwater discharge, such as wetlands, rivers, and lakes. Based on the local surface topography, local shallow groundwater is expected to flow towards wetland areas northwest and southeast of the Property. Other man-made features such as wells, roads, filled areas, buried utility lines and sewers, and drainage ditches may alter the natural shallow groundwater flow direction. Based on the results of nearby groundwater investigations, groundwater flow is anticipated to be to the west with groundwater present at a depth of less than 15 fbg. The Kankakee River is located approximately 4,000 feet west of the Property.

#### 4.2 FEDERAL, STATE AND TRIBAL ENVIRONMENTAL RECORDS

A regulatory agency database search report was obtained from Environmental Data Resources, Inc. (EDR), a third-party environmental database search firm. A complete copy of the database search report, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Appendix D.

Stantec evaluated the information listed within the database relative to potential impact to the Property, assessing the potential for impacts based in part on the physical setting. As part of this process, inferences have been made regarding the likely groundwater flow direction at or near the Property. As described in 4.1.3, the inferred shallow groundwater flow direction is likely to be to the west. Observations about the Property and surrounding properties made during the Property reconnaissance are provided in more detail in Section 5.

##### 4.2.1 Listings for Property

The Property was identified in the environmental database report as Concord Custom Cleaners, formerly located at 57 Meadowview Center in the northern portion of the Property. The database identified the Property in the SRP and EDR Historical Cleaner databases. Investigation

RECORDS REVIEW  
December 14, 2015

of the site identified soil and groundwater contamination from the historical use of chlorinated solvents at the site. Remediation consisted of in-situ soil treatment and excavation and off-site disposal of contaminated materials in 2001 and 2002.

The Property received a NFR letter from the Illinois EPA in 2012 after meeting Illinois EPA cleanup standards for residential properties and by excluding the groundwater ingestion pathway using existing groundwater ordinances. Stantec's review of the soil and groundwater data indicates the potential for soil vapor and groundwater at the Property to have been impacted at concentrations exceeding current Illinois EPA cleanup standards for indoor inhalation. To fully address the Illinois EPA regulations revised in 2013, building control technologies may be required at the Property to limit intrusion of contaminants into indoor air.

#### 4.2.2 Listings for Nearby Sites with Potential to Impact Property

Stantec assessed data presented in the environmental agency database search report to evaluate the potential for conditions to pose a REC, CREC, or HREC for the Property.

Based on this evaluation, the following individual facilities were identified as the most likely potential sources of impact to the Property. The basis for why each of the following listed databases is or is not a REC for the property is also provided.

Listed Facility Name/Address	Database Listing	Distance/Direction from Property	REC? (YES / NO)
TD Petes 604 West Brookmont Kankakee, IL 60901	UST and Historical Auto Station	100 feet east	Yes
<p>The site is located 100 feet east of the Property and currently operates as a gas station. Three underground Storage Tanks (USTs) were removed from the site in 1987. One 6,000-gallon diesel fuel UST and two 12,000-gallon gasoline USTs are currently in use at the site. No release has been reported from the site.</p> <p>Based on Stantec's experience with similar circumstances, the long term use of the up gradient site as a gasoline station poses a significant threat of impact to the soils, soil vapor and groundwater at the Property and is considered a REC.</p>			

Based on one or more of the following reasons: distance from the Property, position of sites with respect to assumed groundwater flow direction, the native soils, and regulatory status, none of the remaining listings in the database search report provided in Appendix D are expected to affect soil or groundwater quality at the Property. The environmental records search identified no RECs, HRECs or de minimis conditions at or near the Property.

##### 4.4.1 Land Title Records/Deeds

Land title records and deeds were not provided by the User, and public records were not searched by Stantec. No other land title records were reviewed by Stantec as part of this assessment.

##### 4.4.2 Aerial Photographs

Stantec reviewed historical aerial photographs provided by EDR. The general type of activity on a property and land use changes can often be discerned from the type and layout of structures visible in the photographs. However, specific elements of a facility's operation usually cannot be discerned from aerial photographs alone. The following table summarizes Stantec's observations of the reviewed historical aerial photographs.

#### 4.4.4 Historical Fire Insurance Maps

Fire insurance maps were developed for use by insurance companies to depict facilities, properties, and their uses for many locations throughout the United States. These maps provide information on the history of prior land use and are useful in assessing whether there may be potential environmental contamination on or near the Property. These maps, which have been periodically updated since the late 19th century, often provide valuable insight into historical Property uses.

Stantec requested fire insurance maps from EDR; however no coverage exists for the Property. EDR did provide maps but none of the maps provided any coverage west of Entrance Avenue.

#### 4.4.5 Historical Topographic Maps

Stantec reviewed historical USGS 7.5-Minute Topographic Maps of the Kankakee/Bradley/Bourbonnais, Illinois Quadrangles (scale 1:24,000) to help identify past Property usage and areas of potential environmental concern.

No RECs were noted during our review of the topographic maps. Copies of the historical maps are provided in Appendix E. The following table summarizes the maps reviewed and our observations.

Year	Scale	Observations, Property and Adjoining Properties
1924	1:24,000	The Property appears to be undeveloped. The areas to the north have been developed for residential purposes.

## PHASE I ENVIRONMENTAL SITE ASSESSMENT

SITE RECONNAISSANCE  
December 14, 2015

### 5.0 SITE RECONNAISSANCE

A visit to the Property and its vicinity was conducted by Michael C. Butler and Luisa Price, of Stantec, on October 27, 2015. Access to the Property was provided by Tivoli Enterprises, the potential buyer of the Property. Stantec was unaccompanied during the Property visit. Figure 2 provides information about the Property and adjoining properties and the location of potential areas of environmental concern. Photographs collected during the Property visit are included in Appendix A.

#### 5.1 SITE RECONNAISSANCE METHODOLOGY

The site reconnaissance focused on observation of current conditions and observable indications of past uses and conditions of the Property that may indicate the presence of RECs. The reconnaissance of the Property was conducted on foot and Stantec utilized the following methodology to observe the Property:

- Traverse the outer Property boundary.
- Traverse transects across the Property.
- Traverse the periphery of all structures on the Property.
- Visually observe accessible interior areas expected to be used by occupants or the public, maintenance and repair areas, utility areas, and a representative sample of occupied spaces.

Weather conditions during the visit to the Property were clear and sunny. There were no weather related Property access restrictions encountered during the reconnaissance visit.

#### 5.2 GENERAL DESCRIPTION

<b>Property and Area Description:</b>	The Property is located in an area of commercial and residential uses. The Property is located on the south side of Brookmont Boulevard Avenue. The Property consists of approximately 3.37 acres of land developed with a three-story approximately 45,000 square foot building. A driveway providing access to the surrounding shopping center crosses the central portion of the Property. Paved parking areas are located in the western, southern and northern portions of the building.
<b>Property Operations.</b>	The Property is currently vacant.
<b>Structures, Roads, Other Improvements:</b>	The Property is improved with a three-story, approximately 45,000 square foot building. The building was most recently occupied

The following table summarizes Stantec's observations during the Property reconnaissance.

<b>Observations</b>	<b>Description/Location</b>
<b>Hazardous Substances and Petroleum Products as Defined by CERCLA 42 U.S.C. § 9601(14):</b>	One hydraulic dock leveler, with below grade piping and lift equipment, is located in the northern portion of the building. The reservoir and all above ground piping appeared to be in good condition.
<b>Drums (≥ 5 gallons):</b>	None observed.
<b>Strong, Pungent, or Noxious Odors:</b>	None detected.
<b>Pools of Liquid:</b>	None observed.
<b>Unidentified Substance Containers:</b>	None observed.
<b>PCB-Containing Equipment:</b>	A transformer was located on the north exterior of the building. The transformer was not marked as to its PCB

<b>Other Observed Evidence of Hazardous Substances or Petroleum Products:</b>	None observed.

#### 5.4 INTERIOR OBSERVATIONS

Stantec made the following observations during the Property reconnaissance of the building interiors at the Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
<b>Heating/Cooling Method:</b>	The building is served by a forced air heating and air conditioning system located on the roof of the building.
<b>Surface Stains or Corrosion:</b>	None observed.
<b>Floor Drains and Sumps:</b>	None observed.
<b>Other Interior Observations:</b>	None observed.

#### 5.5 EXTERIOR OBSERVATIONS

Stantec made the following observations during the site reconnaissance of exterior areas of the Property and/or identified the following information during the interview or records review portions of the assessment:

Observations	Description
<b>On-site Pits, Ponds, or Lagoons:</b>	None observed.
<b>Stained Soil or Pavement:</b>	None observed.
<b>Stressed Vegetation:</b>	None observed.
<b>Waste Streams and Waste Collection Areas:</b>	None
<b>Solid Waste Disposal:</b>	No areas indicative of solid waste disposal were observed.
<b>Potential Areas of Fill Placement:</b>	No mounds, piles or depressions suggesting the placement of fill material were observed on the Property.
<b>Wastewater:</b>	No exterior wastewater discharge was observed.
<b>Stormwater:</b>	Stormwater is anticipated to flow overland to the north

### PHASE I ENVIRONMENTAL SITE ASSESSMENT

EVALUATION  
December 14, 2015

## 7.0 EVALUATION

This section provides a summary overview of Findings, Opinions, and Conclusions.

### 7.1 FINDINGS AND OPINIONS

Information gathered from interviews, reviews of existing data, and a property inspection was evaluated to determine if RECs are present in connection with the Property. Based on this information, Stantec made the following findings and developed the following opinions.

- Finding 1: The Property was developed for agricultural use prior to the 1930s and redeveloped for commercial use in the 1970s. The Property has mainly been used for retail or office uses since that time.
- Opinion 1: None of the historical uses of the Property, other than the former drycleaner as discussed below, are considered to be a REC.
- Finding 2: Concord Custom Cleaners was formerly located at 57 Meadowview Center in the northern portion of the Property. Investigation identified soil and groundwater contamination from the historical use of chlorinated solvents at the Property. Remediation consisted of in-situ soil treatment, and excavation and off-site disposal of contaminated materials in 2001 and 2002. The site received a NFR letter from the Illinois EPA in 2012 after meeting Illinois EPA cleanup standards for residential properties and by excluding the groundwater ingestion pathway using existing groundwater ordinances. Stantec's review of the soil and groundwater data indicates the potential for soil vapor and groundwater at the Property to have been impacted at concentrations exceeding current Illinois EPA cleanup standards, particularly regarding the indoor inhalation exposure pathway.
- Opinion 2: While a NFR letter has been issued by the Illinois EPA, the remaining contamination has a potential to impact the Property at concentrations exceeding Illinois EPA cleanup standards, particularly for the indoor inhalation exposure route, and is therefore considered a REC. To fully address the Illinois EPA regulations revised in 2013, building control technologies may be required at the Property to limit intrusion of contaminants into indoor air.
- Finding 3: One hydraulic dock leveler, with below grade piping and lift equipment, is located in the northern portion of the building.
- Opinion 3: Based on Stantec's experience with similar circumstances, the presence of an in ground hydraulic lift system poses a threat of release and impact to the soils, soil vapor and groundwater at the Property and is considered a REC.

## 50 AND 57 MEADOWVIEW CENTER, KANKAKEE, ILLINOIS

### PHASE I ENVIRONMENTAL SITE ASSESSMENT

#### EVALUATION

December 14, 2015

- Finding 3: A gasoline station is located approximately 100 feet east of the Property at 604 Brookmont Boulevard. The site has been used as a gasoline station since the early 1970s. Three USTs were removed from the site in 1987. One 6,000-gallon diesel fuel UST and two 12,000-gallon gasoline USTs are currently in use at the site. No release has been reported from the site.
- Opinion 3: Based on Stantec's experience with similar circumstances, the long term use of the up gradient site as a gasoline station poses a threat of impact to the soils, soil vapor and groundwater at the Property and is considered a REC.
- Finding 4: Stantec was not able to obtain historical records that document the Property history in 5-year intervals. Stantec did not interview the owner of the Property and did not review an environmental lien search records. These data failures represent data gaps.
- Opinion 4: The lack of review of this information is not considered significant. Based on the information obtained during the course of this ESA, the absence of this information did not appear to affect the ability of the EP to identify RECs, HRECs, or de minimis conditions.
- Finding 5: An environmental records search was performed and identified several additional sites within their respective ASTM E 1527-13 search radii of the Property that may represent RECs, HRECs, or de minimis conditions.
- Opinion 5: Based on one or more of the following reasons: distance from the Property, position of sites with respect to assumed groundwater flow direction, the native soils, and regulatory status, none of the sites identified in the environmental records search report are expected to affect soil or groundwater quality at the Property. The environmental records search identified no RECs, HRECs or de minimis conditions at or near the Property.

## 7.2 DATA GAPS

The federal AAI rule [40 CFR 312.10(a)] and ASTM E1527-13 identify a "data gap" as the lack or inability to obtain information required by the standards and practices of the rule despite good faith efforts by the EP or the User.

Any data gaps resulting from the Phase I ESA described in this report are listed and discussed below.

### 7.3 CONCLUSIONS

Stantec has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E1527 of 60 and 61 Meadowview Center, Kankakee, Illinois, or the "Property". Any exceptions to, or deletions from, this practice are described in the Data Gaps section of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the property except for the following:

- A drycleaner was formerly located in the northern portion of the Property. The Property received a No Further Remediation (NFR) letter from the Illinois EPA in 2012; however analysis of the soil and groundwater data indicated the potential for soil vapor and groundwater at the Property to continue to be impacted at concentrations exceeding applicable Illinois EPA cleanup standards.
- A site located 100 feet east and up gradient up the Property has been utilized as a gas station since the early 1970s.
- One hydraulic dock leveler, with below grade piping and lift equipment, is located in the northern portion of the building.

Mr. Butler has nearly 20 years of professional experience in environmental engineering, environmental due diligence, contaminant investigation and remediation, and sustainable property redevelopment projects. His areas of expertise includes Brownfield Redevelopment, including inventory and assessment; Phase I and II Environmental Site Assessments; Contaminated Soil Removal and Management; Chlorinated Solvent Investigation and Remediation; Clean Construction and Demo Debris (CCDD) Management; Underground Storage Tank Remediation; Soil and Groundwater Investigation and Remedial Action; Regulatory Agency Negotiation and Liaison; and Greener Remediation, Building and Development. Michael's is an active participant in several ASTM committees, including and is focused on assisting clients understand the requirements of ever-changing standards and regulations.

#### EDUCATION

Bachelor of Science, Environmental Engineering,  
Northwestern University, Evanston, Illinois, 1999

OSHA, Health & Safety Training for Hazardous  
Waste Operations, 40-hour, 1999

#### REGISTRATIONS

LEED Accredited Professional, U.S. Green Building  
Council

Professional Engineer #062057467, State of Illinois

#### MEMBERSHIPS

#### PROJECT EXPERIENCE

##### **Brownfield Remediation and Redevelopment**

US EPA Brownfield Grants, Wisconsin, Illinois, and  
Minnesota

*Michael has been responsible for drafting other successful applications to the United States Environmental Protection Agency's (US EPA) Brownfield Assessment Grant program. Michael has acted as liaison between municipal representative and community groups to identify the potential brownfield redevelopment sites within and community, as well as corresponding economic development opportunities. He has then successfully crafted grant applications which effectively communicate the needs of the community to the US EPA resulting in numerous \$200,000 assessment grant awards. He has also assisted in the implementation and management of several grant projects in Wisconsin and Minnesota.*

Illinois EPA Municipal Brownfield Redevelopment  
Grant, Tabor Property, Peoria, Illinois

*Michael has been responsible for drafting the successful application to the Illinois Environmental Protection Agency's (Illinois EPA) Municipal Brownfield Redevelopment Assessment Grant program for the City of Peoria which resulted in the awards of \$400,000 in grant money. He also serves as the Project Manager assisting the City implementing the grants, including work plan development, preparation of quality assurance project plans (QAPPs), preparation of site eligibility determination requests, preparation of site-specific Sampling and Analysis Plans (SSSAPs) and Health and Safety Plans (HASPs), oversight and performance of assessment field work and reporting activities, performance of community outreach and preparation of quarterly, semi-annual, and annual reports.*

### US EPA Brownfield Grants, Kankakee, Illinois

Michael has been responsible for drafting the successful application to the United States Environmental Protection Agency's (US EPA) Brownfield Assessment Grant program for the City of Kankakee which resulted in the awards of \$400,000 in grant money. He also serves as the Project Manager assisting the City implementing the grants, including work plan development, preparation of quality assurance project plans (QAPPs), preparation of site eligibility determination requests, preparation of site-specific Sampling and Analysis Plans (SSSAPs) and Health and Safety Plans (HASPs), oversight and performance of assessment field work and reporting activities, performance of community outreach and preparation of quarterly, semi-annual, and annual reports.

### City of Chicago Department of Environment, Raber House Park\*, Chicago, Illinois

Michael acted as the project manager for the Raber House project which began in 2009 as an initial Phase I and Phase II environmental site assessment (ESA) which identified metals and petroleum-related compounds in soil and groundwater in the area at concentrations in excess of IEPA remediation objectives. Additional investigation was conducted as the City acquired additional adjacent properties, including a former school site. The results of the final subsurface investigation identified the widespread presence of contaminants which interfered with the City's preferred use of the site for urban agriculture. Michael developed and oversaw a plan included importing over 1,500 cubic yards of clean clay to act as barrier under the agricultural growing media, including screening and testing soils located on other site and properties to determine if they were fit for beneficial reuse at the site. The project involved delivery of civil and environmental services related to the design, stormwater management, and oversight of clean soil importing at the site.

### Brownfield Redevelopment, Wauconda, Illinois

Michael was the project manager and technical consultant for this brownfield cleanup and redevelopment on a site that was contaminated with hazardous materials from former manufacturing operations. In his role, Mike oversaw our development of the project plan, oversight of investigation and remediation activities, as well preparation of a brownfield grant application. To prepare the property for redevelopment, the project team prepared a Remedial Action Completion Report and facilitated a No Further Remediation letter from the Illinois Environmental Protection Agency. After obtaining the letter for unrestricted property use, the brownfield was redeveloped into a much-needed public parking facility.

### Environmental Site Assessments Phase I, II, III

#### Manufacturing and Warehouse Portfolio

Michael provided project management and technical oversight and guidance for a series of Phase I and Phase II ESA for a large furniture manufacturer at over 30 facilities nationwide. Our project team completed Phase I Environmental Site Assessment which focused on determining the historical use of the property to determine the impact of historical manufacturing operations on the sites. The investigations, including asbestos and lead based paint inspections, assisted the client in evaluating the liabilities associated with their real estate portfolio as part of a logistics evaluation.

#### School District Facility Expansion, Lake Bluff, Illinois

Michael provided project management and historical research assistance to the school district during a significant school construction and expansion project. Our project team completed Phase I Environmental Site Assessment which focused on determining the historical use of the property to determine if expansion would impact historical resources. The property was located along the historic Green Bay Trail with a potential for historic farmsteads, homes, churches and cemeteries to have been located in the area.

#### City of Chicago Department of Environment, Chicago, Illinois

Michael has provided project management technical consulting for numerous projects with the City of Chicago Department of Environment. These projects have ranged from the identification of environmental concerns prior to site redevelopment through Phase I and II Environmental Site Assessments to corridor studies investigation soil contamination near sewer lines prior to sewer upgrade projects.

#### Seven-Acre Commercial Redevelopment, Cary, Illinois

Michael provided project management as a developer worked to clean up and redevelop a seven-acre, five-property site in Cary. Our project team completed Phase I and II Environmental Site Assessments, asbestos investigations, underground storage tanks and remediation planning activities. Once cleanup was complete, the site was redeveloped into a mixed-use facility that included retail and hospitality businesses.

#### **Environmental Site Remediation**

Senior Living Redevelopment, Chicago, Illinois

*Michael provided technical consulting for this project on the site of a former furniture factory and gas station on Chicago's south side. The project transformed a lead- and PNA-contaminated property, containing substantial amounts of urban fill, into a LEED-certified senior living facility. Mike worked with the client's project team and commercial building to complete strategic investigation and oversee remediation activities during construction, allowing for re-use of the site with minimal excavation and disruptive remediation, thereby saving the client time and money on the redevelopment.*

Former Printing Facility, McHenry, Illinois

*Michael has provided project management and technical oversight as Stantec investigated and monitored groundwater contamination present at the site due to former industrial printing operations. Investigation and subsequent groundwater modeling demonstrated a nearby potable well to be at risk. The adjacent property was connected to a nearby city-provided water supply and risk-based objectives were utilized to obtain a No Further Remediation letter for the site. This approach allowed the client to achieve their goals without the need for costly remediation.*

Various Retail Drycleaning Facilities, Illinois

*Michael has been involved in the investigation, remediation and redevelopment of more than 50 dry-cleaning facilities. The work has focused on determining the overall impact to soil and groundwater near sites which have used chlorinated and petroleum based solvents during dry-cleaning operations. Mike has extensive experience designing and implementing remedial strategies targeted to meet the size and budget requirements of the projects. The remedial efforts have included soil excavation, chemical oxidation, accelerated bioremediation and in-situ soil mixing to address contaminants within the constraints of each project.*

Commercial Scale Drycleaning Facility, Addison, Illinois

*Mike provided project management and technical consulting for this investigation and remediation of a regional dry cleaning facility for a national tuxedo rental company. The project involved a through subsurface investigation based on historical uses of chlorinated solvents at the site and potential migration through a nearby sanitary sewer. The project team implemented a remedial strategy that involved the removal of the impact sewer line and surrounding soils, as well as in-situ chemical oxidation to continue to treat contaminated soils which remained.*

### PHASE I ESA USER'S QUESTIONNAIRE

In order to qualify for protection from land owner liability under CERCLA as an *innocent landowner*, *bona fide prospective purchaser*, or *contiguous property owner*, ASTM standard practice E1527-13 and the federal AAI rule (40 CFR 312) require that the User of the Phase I ESA report provide certain information (if available) to the Environmental Professional completing the assessment. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete. Information that is not or cannot be provided to the Environmental Professional may be identified as a "data gap" in the Phase I ESA report.

Please answer the following questions as completely as possible. Attach additional pages as needed. Return the completed questionnaire to Stantec along with the executed Authorization For Services form.

1. Property Information

Property Name: Old Dry Cleaners  
Property Address: 50 & 57 Meadowview Center  
City: Kankakee State IL Zip 60901  
Property Owner Name: Roman Catholic Diocese of Joliet  
Property Owner Phone #: NA

2. Key Site Manager

*This should be an individual with good knowledge of the uses and physical characteristics of the property, and the processes or activities currently conducted at the property. Often this will be the property manager, chief physical plant supervisor, or head maintenance person.*

Name: Ed Dobbs  
Company/Organization/Title: Classic Cinemas, Superintendent  
Phone # 630-786-4618 E-Mail Address: edobbs@classiccinemas.com

3. Contact for Site Access (if different from Key Site Manager)

Name: SAME (ADDED) list of key contacts  
Company/Organization/Title: \_\_\_\_\_  
Phone # \_\_\_\_\_ E-Mail Address: \_\_\_\_\_

4. Environmental Cleanup Liens. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

\_\_\_\_\_ Yes \_\_\_\_\_  No

If yes, describe or attach details of the lien \_\_\_\_\_

5. Activity and Land Use Limitations. Are you aware of any activity and use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded as applicable to the property as a result of environmental contamination, investigation, cleanup, or related matters?  
\_\_\_\_\_ Yes                       No

If yes, describe or attach details of the limitations \_\_\_\_\_  
\_\_\_\_\_

6. Specialized Knowledge or Experience. As the User of this ESA, do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property, such that you would have specialized knowledge about chemicals and processes used by this type of business?  
\_\_\_\_\_ Yes                       No

If yes, describe or attach details of your specialized knowledge or experience \_\_\_\_\_  
\_\_\_\_\_

7. Relationship of Purchase Price to Fair Market Value of Property. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, do you have any reason to believe that the reduced purchase price may be related to contamination known or believed to be present at the property?

\_\_\_\_\_ Yes, I have reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property?

No, I have no reason to believe that the purchase price for the property has been reduced in comparison with the fair market value due to contamination known or believed to be present at the property?

\_\_\_\_\_ Not applicable. User is not involved in a purchase or sale of the property.

8. Commonly Known or Reasonably Ascertainable Information. Are you aware of commonly known or reasonably ascertainable information about the property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases of hazardous substances or petroleum products? For example:

Do you know the past uses of the property?  
 Yes (describe) Dry Cleaners  
\_\_\_\_\_ No

Do you know of chemicals, hazardous substances or petroleum products that are present or once were present at the property?  
\_\_\_\_\_ Yes (describe) \_\_\_\_\_  
\_\_\_\_\_ No

Do you know of spills or other releases of chemicals, hazardous substances or petroleum products that have taken place at the property?  
\_\_\_\_\_ Yes (describe) \_\_\_\_\_  
\_\_\_\_\_ No

Do you know of any environmental cleanups that have taken place at the property?

Yes (describe) \_\_\_\_\_

No \_\_\_\_\_

9. The Degree of Obviousness of Contamination. E1527-13 and the federal AAI rule (40 CFR 312.31) require that the Phase I ESA consider the degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation. Based on your knowledge and experience related to the property, are there any *obvious* indicators that point to the presence or likely presence of contamination at the property?

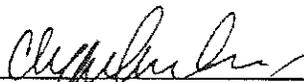

Yes (describe) Former Dry Cleaners \_\_\_\_\_

No \_\_\_\_\_

10. Availability of Previous Environmental Reports. Are you aware of previous environmental site assessment reports, other environmental reports, documents, correspondence, etc. concerning the property and its environmental condition?

Yes (please identify and provide copies, if available) \_\_\_\_\_

No \_\_\_\_\_

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major

redesign to support facility operating permits required under Title V of the Clean Air Act.

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Annual Waste Handled:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal NPL site list***

##### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

##### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

### *Federal CERCLIS NFRAP site List*

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

### ADDITIONAL ENVIRONMENTAL RECORDS

#### *Local Brownfield lists*

##### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

### EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

### US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

### HWAR: Hazard Waste Annual Report

Each year, Illinois hazardous-waste generators tell the Illinois EPA the amounts and kinds of hazardous waste they produced during the previous year. Generators indicate by code the types of wastes produced and the steps they took to manage these wastes. If some or all of these wastes were sent to commercial treatment, storage, and disposal facilities (TSDFs), that information and the identity of each receiving facility also are submitted. Illinois TSDFs likewise report the types and quantities of wastes received from in-state and out-of-state generators; they also report the procedures they used to manage these wastes.

Injection wells are used for disposal of fluids by "injection" into the subsurface. The construction of injection wells range from very technical designs with twenty-four hour monitoring to simply a hole dug in the ground to control runoff. As a result of this diversity, the UIC Program divides injection wells into five different classes.

### EDR HIGH RISK HISTORICAL RECORDS

#### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

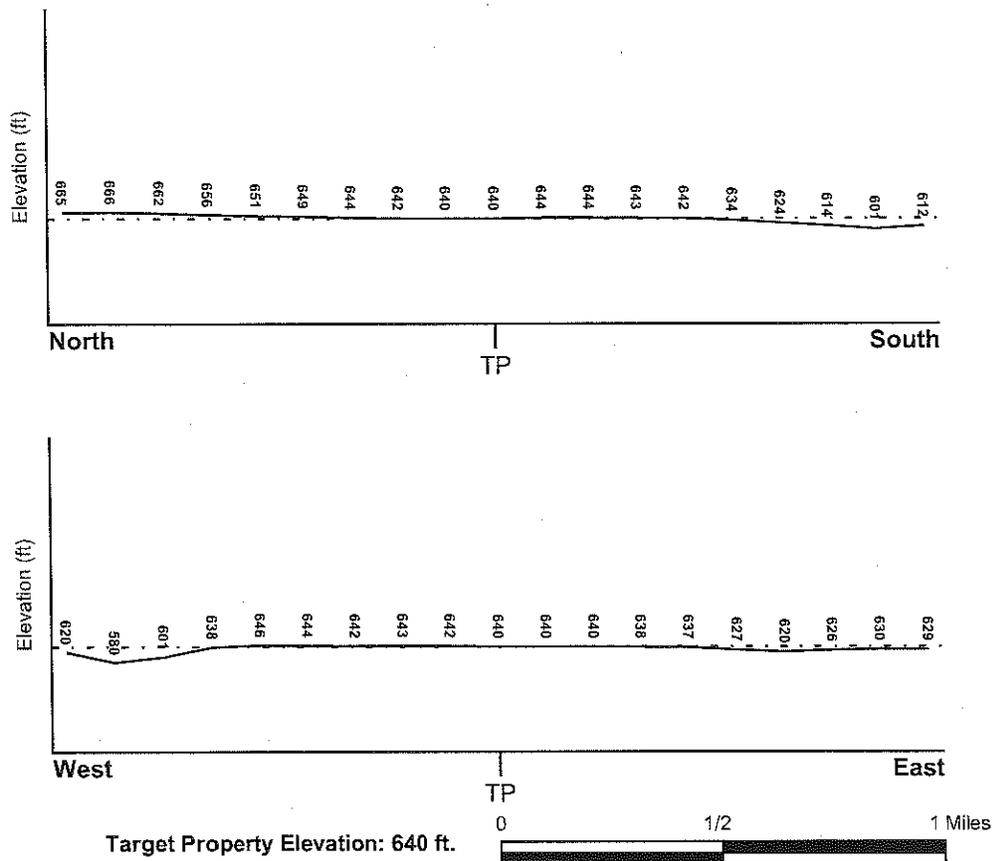

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

#### Soil Map ID: 1

Soil Component Name: Channahon

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 38 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

#### Soil Map ID: 2

Soil Component Name: Rockton

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

## PHYSICAL SETTING SOURCE RECORDS SEARCHED

### TOPOGRAPHIC INFORMATION

#### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

#### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

### HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### HYDROGEOLOGIC INFORMATION

#### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

### GEOLOGIC INFORMATION

#### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

#### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

#### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

**When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.**

*Thank you for your business.*  
Please contact EDR at 1-800-352-0050  
with any questions or comments.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Stantec were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.
